

MAQUI FLAVOURED ANDES MOUNTAIN WATER SPRING WATER

A unique product made with the purest water in its natural state found in the largest natural water spring flowing from the foothills of the Andes Mountains into Colico Lake in Chile, flavored with Maqui Berry, grown in the unique balanced ecosystem surrounding the water spring.

MAQUI BERRY

Maqui berries are very rich in anthocyanins, which are purple pigments with **very high antioxidant activity**. Specifically, maqui berries contain high levels of anthocyanins called delphinidins, making it the most antioxidant fruit of the world: **9 times more than blue berry and 30 times more than grape.**

This wild berry is only found in the south of Chile and part of Argentina, in the same place where Andes Mountain Water spring is found. **Mapuche people** consider the Maqui plant as one of its three sacred trees, used not only for cooking but also for its **powerful medical benefits**.

BENEFITS

The delphinidins demonstrate potent anti-inflammatory activity, **reducing the growth of colon cancer cells, cardiovascular diseases, diabetes, arthritis** and it even prevents the **oxidation of cholesterol in the blood**. It's also proved that the intake of maqui berry causes a significant **increase of insulin in the body, suppressing blood glucose**, therefore evening out energy and preventing the formation of **new fat cells**. As a result, maqui may prove to be a beneficial aid in **weight control**. Maqui also demonstrates **antibacterial activity**, which suggests that it may aid in preventing illness due to foodborne germs.

“They are sweet, bursting with flavor, and something I would be happy to eat every day. But beyond the marvelous taste, maqui delivers real health benefits.”

Dr. Juan Hancke, a medical doctor who has devoted several years of intensive research into this super berry.
